***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-21 are rejected under 35 U.S.C. 103(a) as being obvious over Vo (U.S. 5806000).
3. Vo teaches (columns 4-7) a method of signal processing to determine a message in a multiplexed digital signal, wherein a voice channel assignment subchannel for voice channel assignment signals, and a short messaging subchannel for short messaging signals is time-division multiplexed in the digital signal, comprising: receiving the multiplexed digital signal; demultiplexing the multiplexed digital signal to generate a short messaging signal and a voice channel assignment signal;
4. Vo does not teach screening the voice channel assignment signal from further processing; However Vo does teach determining the message from the short messaging signal so it therefore would have been obvious to one of ordinary skill in this art to screen out voice assignment signals to preserve channel resources.
